NASA Case No. MFS-31,303-1: Generalized Fluid System Simulator Program, Version 2.01c. This program analyzes steady-state and transient flows in a complex system, using network modeling techniques to produce a simplified representation of complex multidimensional flow. The networks are modeled using flow branches and nodes, and can range from simple systems consisting of a few nodes and branches to very complex networks containing many flow branches simulating valves, orifices, bends, and turbines.
